Körber One Screen To Voice

The key to voice-enabling
any workflow

Körber One Screen To Voice

The Körber One Screen To Voice solution quickly and easily adds voice capabilities to your existing screen-based processes. With minimal IT overheads, you can rapidly gain the benefits of a quality voice operation, including:

- **Increased accuracy and productivity**
- **Reduced training time**
- **Improved operator comfort**
- **Enhanced safety**

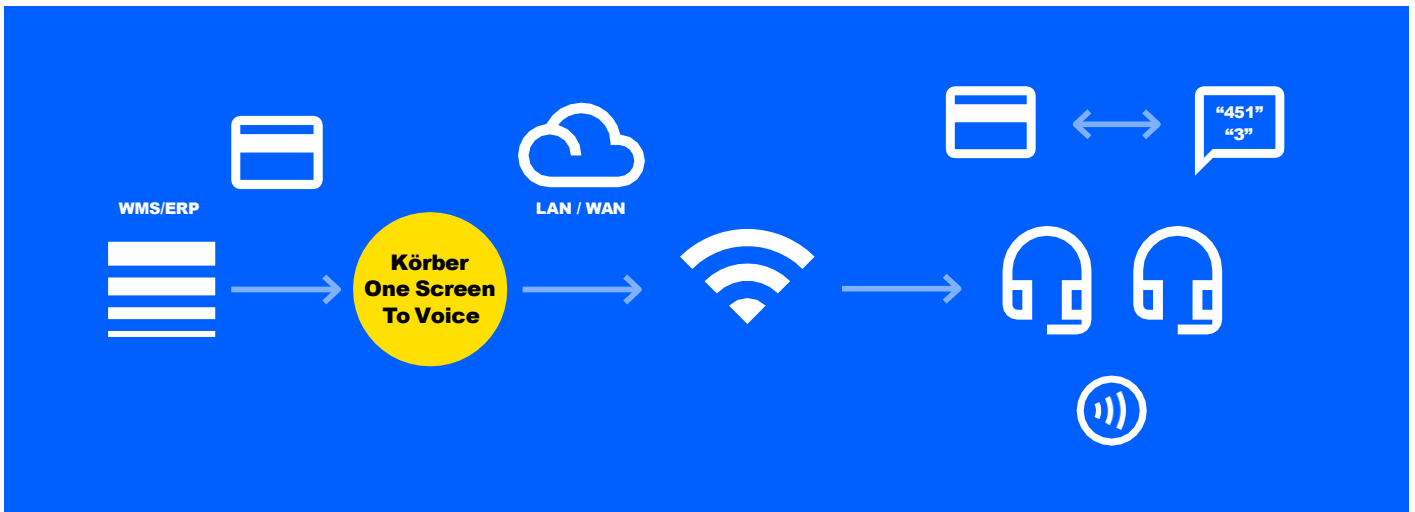

Importantly, there is no need to change or reconfigure your enterprise resource planning or warehouse management system (WMS). Screen To Voice keeps the exact format of data interactions that the WMS expects, so administration, reporting and labor management systems are updated as usual. Because the overall process flow is the same, you minimize user training, and your screens are still there to use should you need them. There is no lengthy software implementation and no additional burden on your IT team.

Körber One Screen To Voice doesn't just "speak the screen." It applies our renowned voice expertise to extract the key data and deliver an ergonomic and efficient voice dialog. You can carry out operations such as multi-order picking, check-digit management and product identification without scanning, even if not formally supported by your WMS. You can enhance your process improvement by reading information from your WMS and other data sources. And you can seamlessly integrate Körber One Screen To Voice with your existing direct voice interfaces, bringing hands free, eyes free work to other processes and optimizing the use of your voice assets.

Features and benefits

- **Fast implementation**
- **No need to modify your WMS system**
- **Minimal IT support required**
- **Ability to voice enable any workflow**
- **Reduced errors**
- **Improved productivity**
- **Lower operating costs**
- **Rapid return on investment**

Enhanced processes

The advanced architecture of Körber One Screen To Voice provides voice optimization beyond that on your WMS screens, with no need for additional WMS coding or complex interfaces. You optimize your multi-order or batch picking, check-digit management and other processes not traditionally supported by your WMS.

No WMS changes or interfaces

All your current WMS updates, reports and tools work as normal, minimizing change management and protecting existing investments. There is no need to change any core systems, or for new IT interfaces.

Session persistence

With already built-in session persistence, your associates don't need to worry about downtime or incomplete orders when screen connections reset due to radio frequency coverage issues. Each user's session is held open on the back-end system and mobile users are returned to the exact point in the process where they disconnected.

Deeper insight

Used with K.Sight Data Analysis, Körber One Screen To Voice gives your supervisors enhanced visibility and reporting of operations. By analyzing trends, it also acts as a continuous improvement tool.

Highest quality voice recognition

Körber One Screen To Voice uses the industry's leading voice recognition software and headsets. Through advanced voice recognition, regardless of an associate's first language, accent or dialect, you eliminate errors and repetitions, saving precious seconds on each and every task.

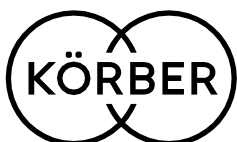

Device support

Körber One Screen To Voice is supported by Android (version 6.0.1 and higher). Honeywell made-for-purpose devices are supported.
